

A METHOD FOR ROUTING INFORMATION OVER A NETWORK

Saleh, Ali; Zadikian, Michael H.; Baghdasarian, Zareh; Parsi, Vahid.

ABSTRACT

5 A method of operating an optical network is described. The network includes
a number of nodes connected by a number of links. A method according to the
present invention provisions a virtual path between a first and a second one of the
plurality of nodes by: identifying the first and the second nodes, discovering a
physical path from the first node to the second node, and establishing the virtual path.
The method discovers a physical path from the first node to the second node by
10 automatically identifying nodes forming the physical path. The method establishes
the virtual path by configuring a set of connections between the nodes forming the
physical path.
